

Artifact Description Appendix: CDC Drone Imagery Compression on DeltaAI

Jooho Kim, Anish Shakya, Yifan Yang, and Jacob Kelly

I. Artifact Scope

The public artifact is the GitHub repository <https://github.com/rayford295/sc26-cdc-deltaai>. It contains the experiment runners, SLURM scripts, summary tables, plotting code, and lightweight visual examples used for the poster draft. Raw full-resolution drone imagery, trained checkpoints, full reconstruction outputs, and DeltaAI logs remain on the project HPC filesystem and are not included in the public repository.

II. Main Public Files

The main experiment code lives under `experiments/compression/`. The summary results used in the poster live under `results/2026-05-15-yifan-selected-256-512-n50/` and `results/2026-05-22-jacob-compression-n20/`. The current poster and IEEE-format summary live under `paper/submission/`.

III. Reproducibility Notes

The workflow depends on NCSA DeltaAI, the project allocation, pretrained CDC checkpoints, and the drone imagery dataset. The public repository documents the run commands, output layout, and metrics. A reviewer can inspect the code and lightweight results locally, but full numerical reproduction requires access to the same DeltaAI environment and non-public input imagery.
